Where is the filter on a bosch dishwasher

Cleaning the dishwasher isn't a task we typically remember, until an unpleasant smell reminds us it's overdue. So what can you do to combat dishwasher odor? Our Bosch dishwasher cleaning tips tackle how to clean a dishwasher, from the tub to the spray arms, to banish bad smells. Bosch Dishwasher Cleaning 101: Eliminating and Preventing Odor

Our Bosch dishwasher cleaning tips effectively attack smell at its source with proper cleaning techniques and basic household supplies. We'll also discuss how regular maintenance and proper use can go a long way in preventing odors. Clean the Dishwasher Filter A dishwasher filter works by screening out food particles that could otherwise clog the dishwasher drain. Over time, these food particles collect in the filter and create an offensive odor as they decay. Here's how to clean a Bosch dishwasher filter to remove smelly food particles and eliminate odor: Remove the dishwasher's lower rack and spray arm. Twist the filter cap and pull up to remove the filter and mesh screen. Rinse the filter and screen in warm water. Place the filter back in the dishwasher. Twist the filter cap in the opposite direction to lock in place. Replace the spray arm and lower rack. The dishwasher tub is a warm, moist environment that can easily breed smelly bacteria on leftover food particles. Here's how to clean a Bosch dishwasher tub and banish odor with basic household ingredients: White vinegar: Pour 1 cup of white vinegar in the base of an empty dishwasher and run a heavy clean cycle. Baking soda: After running a vinegar cycle, sprinkle 1 cup of baking soda in the dishwasher's base and allow it to sit overnight. Run a regular, empty clean cycle in the morning. Bleach: For persistent mildew, pour 1 cup of bleach in the base of the empty dishwasher and run a 3rd clean cycle. Skip this step if your dishwasher has a stainless steel interior, as bleach can discolor stainless steel. Clean Dishwasher Spray Arms The small holes on a dishwasher's spray arms often become blocked with food particles, preventing water from spraying outward and leaving dishes dirty. While proper dishwasher loading tips can prevent these blockages, mold and mildew can still collect on the spray arms, creating persistent odor. Follow these Bosch dishwasher cleaning steps to address the spray arms: Remove the dishwasher's lower racks. Lift up on the lower spray arm and twist the upper arm's knob to remove it. Use a toothpick to remove food particles and debris from each arm's holes. Rinse each arm under warm water. Dry with a clean cloth. Reattach the spray arms. Inspect and Clear the Drain Line If Bosch dishwasher smells linger even after the above steps, then a clogged drain line may be responsible. Here's how to inspect the drain line and clear the clog: With a screwdriver and pliers, disconnect the drain hose from the garbage disposal or air cap. Check for blockages by running a dishwasher clean cycle and holding the hose over a bucket or sink. If the hose doesn't drain, then a clog is causing a blockage. Use a straightened hanger or plumbing snake to carefully remove the clog. If the hose drains, then the clog is likely in the portion of the drain line that's behind the dishwasher. As this is a more complex repair, we suggest utilizing a professional service to remove the clog. Tips to Prevent Dishwasher Odors Our Bosch dishwasher cleaning tips can also be part of regular maintenance to prevent odors from recurring. The following suggestions use these tips proactively to avoid odor: Clean the dishwasher filter on a monthly basis. Perform dishwasher tub cleanings every month and wipe down the tub with a clean cloth after each use. Use the right detergent. Bosch recommends using FINISH brand detergent for the best odor-reducing results. Don't use too much detergent, as excessive soap residue can also breed smelly bacteria. Follow the recommendations on your detergent package and use the least possible amount. If a Bosch dishwasher cleaning still leaves you with persistent odor, then it may be time to consult a dishwasher repair service. Aviv Service today can help with any dishwasher repair. At Bosch, we continuously aim to improve our website and the information we provide. We would like to invite you to take part in a short one minute survey. If you wish to be contacted by us, please use our regular contact form here, contact Customer Support at (800) 944-2904, or chat online with a Customer Support representative. Thank you. Disclosure: We may get commissions for purchases made through links in this post. Cleaning your Bosch dishwasher regularly can help keep it in good working order and ensure its longevity. With continued use, dishwashers can become breeding grounds for bacteria and mold. They can also develop stains due to food particles and undissolved detergent. But what is the best way to clean a Bosch dishwasher specifically? We've researched the answer for you and have outlined the steps below. Here are the steps to clean your Bosch dishwasher: Remove the dish racks Rinse out the filter Clean the dishwasher tub Clean the spray arms Inspect the drain line You'll be surprised how far proper use and regular maintenance can go when it comes to extending the life of your Bosch dishwasher. If you are looking for the most efficient way to clean your dishwasher or are experiencing difficulties with removing tough stains, continue reading to learn the best techniques and products to use to clean your dishwasher. How To Clean A Bosch Dishwasher Before you get started, there are a few things you'll need: Rubber cleaning gloves All-purpose cleaner Baking soda A sponge Vinegar 2 microfiber cloths or soft rags Stain rust remover 1. Remove The Dish Racks After you don your rubber gloves, remove the upper and lower racks from the dishwasher. This will make it easier to access the drain, filter, and spray arms. Buy these rubber gloves on Amazon. 2. Rinse out the filter Bosch dishwasher filters are relatively easy to remove and clean. To remove the filter, twist the cap counter-clockwise and pull it up and out of its position. Next, dump any food particles or debris into the trash can. Then, run the filter under warm water and make sure that the mesh material is free of blockages. You can also use a toothbrush on the filter to help scrape off any hardened food particles. Place the filter back in the dishwasher and be sure that it snaps in place. Buy this dishwasher filter on Amazon. 3. Clean the dishwasher tub After you clean the filter, use a damp cleaning rag or microfiber cloth to wipe down the inside of the dishwasher. Use a plastic scraper to clean any hardened food particles that may be stuck to the walls. You can use a cleaner specially formulated for dishwashers or a mild all-purpose cleaner. If you prefer to use a natural cleaner on the dishwasher here are a few options: Buy Affresh dishwasher cleaner on Amazon. Vinegar White vinegar is one of the safest products that you can use to clean the interior of your Bosch dishwasher. To use it, you can add the white vinegar to a spray bottle and spray it on the inside of the dishwasher. After, set the dishwasher on a heavy clean cycle. If you don't have a spray bottle, you can also pour the vinegar into a plastic cup and set it on the top rack of the dishwasher and run the cycle. Bleach (for plastic parts only) Bleach can also be used to get rid of bad odors. To use it, place 1/2 cup of bleach in the dishwasher instead of vinegar to get rid of bad odors, mold, and mildew. Only do this if your Bosch dishwasher model has plastic components (as opposed to stainless steel). Buy Clorox bleach on Amazon. Baking soda Baking soda is a well-known odor absorber and can be another option to use when cleaning your dishwasher. The baking soda can be applied as a paste by adding two tablespoons with 1/4 cup of water and a planet with a damp cloth. You can also simply sprinkle one and a half cups of baking soda inside your dishwasher and let it sit for 4-8 hours or overnight. Afterward, run the dishwasher on a full cycle to remove it. You should notice a significant improvement in its smell. 4. Clean the spray arms Sometimes the spray arms can become clogged from small food particles, grease, or detergent residue. Overloading the dishwasher can be one of the main reasons that they may become clogged. If the spray arms clogged, the dishwasher will not clean the dishes properly. To clean the spray arms, start by twisting the knob on the top arm to lift the lower arm. Remove the arm and inspect their holes. If they are clogged, use a toothpick to remove the debris from them. You can also soak the arms and warm soapy water to clear out the holes. After cleaning the arms, place them back in the dishwasher and reattach them. Buy Cascade dishwasher detergent on Amazon. 5. Inspect the drain line Sometimes food particles may become stuck in the dishwasher's drain line, causing it to give off bad odors. To clear the drain line, you need a pair of pliers (or a screwdriver). Start by disconnecting the drain, using the pliers to get a firm grip on it. Next, take the hose to the bathroom and run it under the bathtub faucet to clear it. If you have a wire hanger, you can straighten it and insert it into the hose to clear any stubborn clogs (you can also purchase a plumbing snake for this task). If you don't want the debris from the clog going into your tub drain, place a bucket on the side of the tub and place the other end of the hose in it for drainage. After cleaning the hose, attach it back to the drain. Quick Tips Amount Of Dishwasher Liquid Always use the recommended amount when adding dishwasher liquid or powder detergent to your dishwasher (this can be found on the back of the bottle or box). Adding too much detergent to your dishwasher will cause it to create excessive suds which can cause clog the drain line, basket, and valve. Dishwasher Salt Hard water or water that contains a lot of minerals can leave mineral stains on the interior surface of a dishwasher. You can combat this by adding dishwasher salt to the dispenser either bi-weekly or monthly, depending on how often you use your dishwasher. The salt will break down the minerals in the water and prevent them from adhering to the surface of the dishwasher (many of them also have powerful degreasing agents). Clean The Dishwasher Clean the dishwasher at least once a month if you use it at least three times a week. Regular cleaning can prevent bacteria from developing inside the dishwasher from food particles and spilled liquids—which are the most common reasons for foul-smelling dishwashers. It can also prevent grime and mold from forming. Clean Food Particles Always clean food particles off dishware thoroughly before putting them in the dishwasher. This is probably one of the most important practices to prevent bad odors, clogged components, and surface stains. For the best results, use a spoon to clean the food particles off your dishware (particularly plates, bowls, and Tupperware) before tossing them in the dishwasher. Crockpot Placement Place crockpots upside down in the dishwasher so that they don't flip off the rack during the cycle. Also, always place dinner plates in the same direction so that the water from the spray arms can reach all of them. If not, you may end up with a row of plates that are only clean on one side. How to clean Bosch dishwasher filter? Bosch dishwasher filters are really easy to clean. You'll simply need to twist and lift the filter out of its compartment and adopt any debris that it may contain in the trash can. Then, you'll need to run the filter under a stream of running water to remove particles that may be lodged in the mesh strainer. For hardened particles, use a toothpick to dislodge them. How often to clean Bosch dishwasher filter? Depending on how often you use your dishwasher, cleaning the filter every one to three months is a good idea, as it would help to remove any build-up or residue. This is an essential part of maintaining a Bosch dishwasher, as it will prevent the drain from being clogged. How do you descale a dishwasher? You can descale your dishwasher by first running the dishwasher on a full cycle at the hottest temperature available (the steam will help to lift any surface stains). Once the cycle is complete, sprinkle the descaler on the bottom of a dishwasher and then run the "self-cleaning" cycle. How often should you descale a dishwasher? If you live in an area that has hard water and you use your dishwasher often, you may want to decalcify it every 3 to 6 months. If this is not the case, decalcifying annually (or bi-annually) is usually recommended. It's best to look at the care instructions of your Bosch dishwasher to see the recommended frequency for descaling. Wrapping Things Up Bosch dishwashers are one of the best quality dishwashers that you can purchase today. Performing regular cleaning and maintenance can help your dishwasher to operate with optimal performance and extend its lifespan.
